

Swarm Intelligence (SI)

Dr. Kiran Manjappa

Dept. of IT, NITK

Classical Computation

Classical computing is **good** at:

- Rule-based reasoning
- Constant repetition of *well-defined* actions.

Classical computing is **bad** at:

- Robustness to damage
- Dealing with vague and incomplete information;
- Adapting and improving based on experience

Why is SI interesting for IT?

- Distributed system of interacting autonomous agents
- Goals: performance optimization and robustness
- Self-organized control and cooperation (decentralized)
- Division of labor and distributed task allocation
- Indirect Interactions

Swarms Which Inspired Researchers

- Ant Colony
- Termites
- Bees
- Flock of Birds
- School of Fish
-

Ants and Termites

- Use concept of *stigmergy*, a form of indirect communication, for their coordination.
- Through a chemical substance called *pheromone* the stigmergy is achieved.
- Work in two phases
 - A non-coordinated phase
 - Coordinated phase.

Ant Colony Algorithm / Termite Algorithm

- Inspired by the foraging behavior / hill building nature.
- Each node will have a pheromone table.
 - List of neighbors and destinations it can reach
- When packet arrives pheromone is updated by some constant.
- Pheromone will decay over fixed period.
- Each link will have a probability of being used, per packet routing protocol

Four Principles

- *Positive Feedback*
- *Negative Feedback*
- *Randomness*
- *Stigmergy*

Analogy between the Termite Characteristics and Network Characteristics ?

Where Can I use this ?

Bees

- Finding the nectar or pollen place.
- Recruiting the workers to collect the nectar or pollen
- Cannot use pheromone for communication
- Will use dancing language to communicate with the other workers in the hive
 - distance, direction and quality of the nectar and pollen

- Food source is within 50 meters from the hive, a worker bee performs round dance.

- If the food source is away from the hive for more than 50 meters, worker bee will perform *waggle dance or wag-tail dance*

- *duration of straight line, tempo of the dance, duration of the buzz sound and the dancing duration measured in seconds*

- Direction of the food source to the hive is bit convoluted
- If the food source is in the direction of the sun
 - Tail wagging dance vertically upward direction in the hive (Fig. 4a).
- If the food source is in the opposite direction of the sun
 - Tail wagging dance in vertically downward direction in the hive (Fig. 4b).
- If the food source is located at an angle x degrees to the left of sun,
 - Tail wagging dance at an angle x left of the vertical to the hive (Fig. 4c).
- If the food source is located at angle y degrees to the right of the sun,
 - The waggle dance at an angle y right of the vertical to the hive (Fig. 4d).

Analogy ?

Scout Bee - checking the path resources

Bats

- Two distinct characteristics
 - only mammal to have wings
 - having advanced capability of echolocation
- The bats produce a very loud pulse and listen for the echo.
- The pulse varies when it echoes back.
- Type of prey, its distance, its orientation and its moving speed using the Doppler Effect.
- Eavesdrop the information to other specimens as well

Echolocation in Bats

- These bats produce very loud pulse and listen for the echo.
- Allows them to find their prey and its other features in complete darkness.
- Find and differentiate different types of insects in complete darkness and locates and avoids obstacles on the fly.
- With this they can detect the distance and orientation of the target, type of prey and its moving speed using the Doppler Effect

————— *Pulse Released from Bat*

- . - . *Echoed Pulse after Hitting the Prey and Other Objects*

--- Pulse Released from Bat

— Echoed Pulse after hitting the prey and other objects

Summary

- There are analogies in distributed computing and social insects
- Biology has found solution to hard computational problems
- Biologically inspired computing requires:
 - Identification of analogies
 - Computer modeling of biological mechanisms
 - Adaptation of biological mechanisms for IT applications

Future Directions...

- Literature explores intelligence of only single insects.
- Look around .. You may get a hint ...
